This is the first time we are faced with a second round elections scenario. In this new experience of the democratic exercise we can observe, as a predominant characteristic, the dispute between two tickets who are supported by a clearly defined public.

In the past elections, 70% of the voters showed their favoritism towards the Scioli-Zaninni or Macri-Michetti tickets, whether because they were enthusiastic about the candidate or because they saw in them an effective tool to hinder the possibilities of the current rival.

Apart from this dispute, an elusive 30% has avoided, so far, voting for any of these two protagonists, taking refuge in other options.

After the General Elections, both candidates have tried to stimulate this public so that they would make a decision, whether positive or negative. The tension level taken on by the public discussion on politics allows to forecast a high participation rate.

The results of this survey show that, until November 13 of 2015, the voting intention for the candidate Mauricio Macri

(Cambiamos) is of 49%, above the one for Daniel Scioli (FPV), who is positioned at 42.1%. The difference is 6.9%, with 4.7% of undecided citizens, 3.2% who say they will cast a blank vote and 1% that would not vote.

With a linear projection, Mauricio Macri totals 53.8% and Daniel Scioli 46.2%, which establishes a difference of 7.6%.

The results of the rest of the questions posed for this research seem to be absolutely coherent with the voting intention. For example, the sum of the responses «Scioli would be a better president than Macri» and «I prefer Scioli to prevent Macri from becoming president» reaches 42%, versus «Macri would be a better president than Scioli» and «I prefer Macri to prevent Scioli from becoming president», which adds up to 46.6%. Likewise, 40.6% of the ones polled have indicated that they would probably vote for Daniel Scioli, whereas 46.5% would probably vote for Mauricio Macri.

The difference between the candidates and the low percentage of undecided people generate the pressing need on the part of the candidate Daniel Scioli to captivate the public who nowadays prefers Mauricio Macri.

This survey by Giacobbe & Asociados is being published 8 days before the elections, a period throughout which the population will continue with their decision making process and also before the presidential debate on November 15. The behavior of the candidates, the public opinion's perception and the accounts on the event will be, from our point of view, vital for the consolidation or modification of the trends hereby shown.
